### Thermal printing. The professional's alternative to inkjet technology.

The KODAK PROFESSIONAL 8500 Digital Photo Printer offers superior productivity at a competitive price compared to inkjet printers. From proofs to final prints, it is setting high standards for speed and image quality in a sheet-fed desktop thermal printer.

This photo-quality printer can produce 8x10-inch pictures at a quick 75 seconds, a speed superior to other, similarly priced thermal-based and inkjet printers. Prints come in either gloss or matte finish, with a durable laminate overcoat, which inkjets do not provide.

The 8500 printer has a lower per-page print cost than inkjet technology and is easier to use, plugging effortlessly into your existing workflow.

Its enclosed paper path means higher reliability and fewer remakes. Which, along with the affordable cost of thermal printing, means you can control costs and increase revenue.

The 8500 Digital Photo Printer uses dry imaging technology, not inkjet technology, so there are no inkjets to clog and no spills to worry about.

Compact and portable, the 8500 Digital Photo Printer can be used on the road, on site, and on the desktop, opening up a wealth of entrepreneurial opportunities for any professional photographer. The 8500 Digital Photo Printer. It's what the pro's use.
