

HIGHTLY STABLE, DRIFT-FREE

COAXIAL COARSE AND FINE
DISPLACEMENT (10:1 RATION) FOR
FAST FILLING AND PRECISION CONTROL

ADJUSTABLE HEIGHT CONTROL

INTERCHANGEABLE SYRINGES

EFFECTIVE WITH AIR, OIL, AND WATER

XENOWORKS™ ANALOG MICROINJECTOR

The **XenoWorks Analog Microinjector** has been designed with ease of use in mind. It is suitable for air, water and oil, depending on the application and the level of responsiveness required. It has both fine and course displacement for fast filling and precise control and can be outfitted with a 100µl, 500µl or 1000µl syringe. The design of the **Analog Microinjector** allows the tubing to be easily separated from the syringe for easy cleaning or replacing. Spare tubing and fittings are provided with each injector and the Luer-lock and ferrule connectors assure quick and simple assembly.

The tubing length can be altered according to the researcher's needs and ancillary devices, such as three-way valves, may be fitted so that a single injector can control two micropipettes (for applications such as blastomere biopsy).

The **XenoWorks Analog Microinjector** is the perfect tool for various applications including: Intracytoplasmic Sperm Injection (ICSI), Nuclear transfer (NT), Embryonic Stem (ES) Cell Transfer, Holding, Aspiration, and Low Pressure Microinjection.

BRI XenoWorks Analog Microinjector.

Includes: microinjector drive, 1 micropipette holder with tubing and fittings, spare tubing, 500 microliter syringe (100 or 1000 microliter syringe available upon request)
