Powering Potential from the core

Key Features

Not all inspection needs and requirements are the same. That's why we have developed a platform to suit a multitude of needs.

AshCal™

All Omnis are factory calibrated before shipping. No time is wasted performing recalibrations between changing magnifications

RTLDC™

Real Time Lens Distortion Correction algorithm corrects lens distortion for consistent inspection across the entire field-of-view

Save to Network

Networking enables direct saving to the server or cloud for increased workflow efficiency

User Privileges

User privilege settings enables operational control and traceability

Email

Save time by emailing directly from Omni

Independent of PC

Integrated software avoids the expense and task of qualifying a PC

Start with the **core** set, then add your **apps**

Additional Apps

Up to 662x
magnification

Up to 245mm x
139mm field of view

Up to 200mm
working height

Side by Side Image
Comparator

Visually compare your live sample image to a stored master image in the form of a split screen

Image Overlay
Comparator

Identify defects by overlaying and flashing the live sample image against a stored master image

2D Measurement &
Annotation

Accurate measurement and annotation of lines, angles & circles to accommodate a multitude of samples

Image
Stacking

Omnia automatically captures several images at different focal depths to create an image based on the sharpest regions from each capture

On-Screen Digital
Graticules

Create Go-No-Go on screen digital graticules to quickly identify sample defects

Import and
Export DXF

Import and modify autocad DXF files to create graticules for overlay comparison with critical parts. Export DXF files generated from edge detection on parts

Jonathan Higgins, Associate R&D Engineer

Ireland

Goodman Medical

"Working in the medical device industry I've come across many different inspection and measurement platforms, many of which are highly complicated and require constant maintenance and tech support to solve update and compatibility issues. Ash Technologies' OmniCore vision and measuring system is an all-in-one platform that provided a solution to all these issues.

It gives precision measurements and high resolution, high magnification images with a simple user-friendly interface with software applications that minimise error. The inspection applications not only make identifying defects an easy task, but also simplify and speed up operator training and measurement applications, ensuring accurate measurements every time. Software updates can be done at the click of a button with no need for IT support and additional applications can be added just as easily if required.

All in all, I would highly recommend Ash Technologies to anyone looking to simplify and improve their vision and measurement systems. I would also like to add that they have impeccable customer service which is always a plus."

Michael Mulvi, Quality Specialist

Ireland

Conductix Wampfler

The Omni vision system we purchased from Ash Technologies has given us the ability to measure dimensions on our plastic moulded parts that we previously did not have the capability to do. In sourcing this, capability has greatly improved our ability to obtain timely approval from our customers for the new products we are constantly adding to our range.

The Image Stacking function on the Omni vision system is a feature that we have found useful. We use many bought-in high precision components on our assembly line. The Image Stacking function enables us to quickly produce high magnification photographs to highlight to our suppliers any quality issues or areas for improvement. Our suppliers greatly appreciate the precision measurement and quality of the images we can now provide them with.

Roland Rücker, Quality Engineer Optoelectronics

Germany

Heraeus Noblelight GmbH

"Our goal was to acquire a microscope with the smallest possible surface differences between 5 and 500 microns without fatigue. Likewise, we wanted to create sharp images with the abnormalities and thus surveying. The implementation of these requirements has now been confirmed in practice by our employees. What also stands out is the intuitive user interface our employees were able to use within a very short time. The support from their side for commissioning and technical questions is also to be positively emphasized. We can highly recommend this microscope because of our positive experiences and you as a partner."

At Ash we design, develop and manufacture all our user centric solutions in-house and are proud of our award winning innovation process. We use creative Design Thinking to actively empathise with our customers to understand their real unmet needs and jobs to be done. We seek meaningful engagement and co-creation with our end users so we can develop the best possible solutions and services in the quality assurance industry resulting in cost savings, increased workflow efficiency, waste reduction and an overall improved quality process.
